

We can do that.

consilium1

Hosting & Cloud Computing: Virtual Training Platform Project

When an **enterprise client** needed a **virtual training solution**, class was in session. Creating a **cloud-based, virtual lab** complete with **user-defined private training** environments, we **taught our clients more** than the material. We taught them a new **way to work**. | **Problem solved.**

Our client is an international provider of financial services and investment resources that help individuals and institutions meet their financial objectives. Once known primarily as a mutual fund company, our client has adapted and evolved over the years to meet the changing needs of its customers. In addition to more than 300 proprietary mutual funds, they also offer discount brokerage services, retirement services, estate planning, wealth management, securities execution and clearance, life insurance and more.

PROBLEM

An enterprise client was looking for a virtual training solution that:

- Taught their internal team how to implement and utilize the Tomcat Server technology from a consilium1 vendor partner, SpringSource.
- Was comprehensive, inexpensive, and allowed the team to get immediate hands-on experience with the Tomcat technologies.

SOLUTION

The c1 team created a customized, cloud-based solution that effectively conducted hands-on training classes over the internet:

- Supported multiple web applications within a cloud-based environment with private cloud environments designated for each user.
- Users logged in to their "Virtual Sandboxes" for online training exercises and hands-on experimentation. Users could also login anytime, anywhere to complete "homework assignments" or experiment within their virtual sandbox.
- Online training classes were completed in 3 stages for 10 - 15 users over 2 - 5 days. To aid in the implementation process, private user environments were left live for several weeks after the training sessions ended to allow users to return for reference and additional hands-on experimentation.

RESULTS

The c1 team's cloud-based training solution effectively delivered for the client:

- The training solution allowed the client to successfully train their staff on the SpringSource Tomcat technologies and effectively implement the technologies into their existing business operations.
- Streamlined training operations and dynamic provisioning resulting in improved cost management, increased productivity, and scalability for our client.
- c1 created a customizable cloud-based training environment and repeatable process to leverage for future clients. The cloud-based framework can be completely transformed to apply to other technology needs or alternative training solutions.
