We can do that.

C1 | consilium**1**

Hosting & Cloud Computing:
Comprehensive Hosting Services Project

It **always pays** to **help** those who are **helping others.** When **our not-for-profit client** came to us **in need** of a **high performance, low cost network solution,** we took them in. **Armed** with a **powerful,** yet **affordable,** enterprise level of service, we **empowered them** so they could do **more good,** more quickly. | **Problem solved.**

In operation for over 100 years, our client is a not-for-profit organization that provides high-quality care, treatment, education, and supportive services for children and families to build and sustain strong and healthy communities.

PROBLEM	SOLUTION	RESULTS

PROBLEM

Our client was facing multiple challenges:

- **An aging and unsupported IT infrastructure.**

- **Excessive downtime and latency.** Long bouts of downtime for mission-critical applications severely hampered vital processes and communications. Delays were often felt hardest by those in need.

- **Escalating IT support costs.**

- Due to limited infrastructure, staff, and budget, the client was spending a significant amount of time and money on short term solutions.

SOLUTION

consilium1 offered a new solution:

- **Network hosting and support.** Rather than invest in a complete, on-site infrastructure replacement, c1 offered the client an enterprise level, hosted solution and support team for an affordable monthly rate.

- **Hosted, virtualized environment offered stabilized service and increased flexibility and functionality.** Deployed thin clients throughout organization with access to centralized network.

- **Server, software and resource consolidation.** Centralized structure streamlined operations to maximize performance and productivity.

RESULTS

This alternative solution delivered for our client in several ways:

- **Virtualized, thin client structure increased efficiency and accessibility while saving on licensing costs.**

- **Network downtime and latency were eliminated and support staff greatly reduced issue response and resolution time**.

- **Standardized structure and applications improved productivity and accessibility for all on-site and remote users.**

- **Solid platform enabled communications, management, and planning.** Users could collaborate more easily and count on the network to deliver important and timely communications. Executive and IT staff could plan more strategically and leverage a solution that was easier to manage, easier to maintain, and easier to scale as their needs changed.
